Examination Report

Thank you for your application that became examinable under the National Phase (under section 26(G)) on 3 September 2000.

Examination has been performed on the specification as filed and amended pages drawing pages 1/21-24/24 received with the IPER.

1) Section 10(4):

- a) Claims 1, 2, 24-32, 55-58, 73, 74, 76 and 79-82 do not appear to be fairly based on the disclosure. It appears that the polymeric composition should include a polyamide layer containing a cobalt compound.
- b) Claim 5: The term "MXD-6" is unclear.
- c) Claims 37, 45-47 and 58: The term "low" is vague and the scope of the claims is considered to be unclear.
- d) Claim 39 is unclear. The claim limits the polymer to a polyamide. However this restriction appears in claim 36.
- e) Claims 74 and 76 do not appear to be fairly based on the disclosure. The claims describe the result to be achieved but do not adequately define the means for obtaining the result.
- f) The claims do not relate to a single invention. The different inventions are:
 - i) Claims 1-54, 58-71 and 73-82 relate to oxygen scavenging polymeric composition including a polyamide and cobalt.
 - ii) Claims 55-57 and 72 relate to a method of reducing the melt index of a polyamide by adding a metal to it.

Special technical features to form a single general inventive concept do not link these inventions. The applicant may amend the claims to unify the inventions or may divide this application into new applications in each of which one of the distinct inventions is claimed.

2) Section 13:

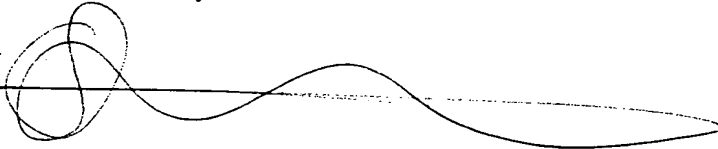

As a result of investigation under Section 13, it appears the invention as claimed has been prior published in:
